

FACEPIECE LENS KITS

PRESS RELEASE

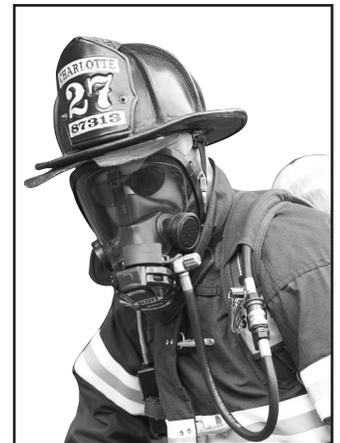

Scott Health & Safety Introduces the Scott Facepiece Lens Kits *Enhancing vision and protecting the eyes of Scott respirator users*

DATELINE (November 6, 2006) – Scott Health & Safety, a part of Tyco Fire & Security, is proud to introduce a full line of custom engineered eyewear designed to improve the vision, protect the eyes, and increase the safety of users of Scott's full line of respiratory protection products. The stylish lens kits are the ideal accessory, and often a necessity, for a multitude of respiratory protection applications for both outdoor and indoor work.

The NIOSH-approved facepiece lens kits are sized, shaped and angled specifically for a variety of Scott facepiece models providing a custom fit to optimize comfort and provide a superior optical system. Two sleek, innovative lens frame designs are available for the single lens Scott AV-2000[®], AV-3000[™], Scott-O-Vista[®], Promask 25 and M120 facepieces. One frame design is available for the dual lens M110 CBRN facepiece.

All frame styles offer four color lens options for different applications, specific tasks, and personal preference. The unique and proprietary SMOKE-SIGHT XT[™] yellow lenses enhance vision in smoke and low light environments and afford sharper contrast detail for sharpshooters and firefighters combating smoke indoors. The True Color Reception[™] (TCR[™]) gray lens absorbs glare away from the eyes improving visibility in bright light situations. The Metallized Surface Lenses[™] (MSL[™]) with blue or silver mirrored lenses absorb and reflect glare away from the eyes while aiding in job performance and safety. For those requiring prescription glasses, the prescription-ready frames can be fitted by any optometrist with a user's preferred lenses, including bifocals.

"Industrial workers and police officers who are required to wear respiratory protection in the performance of their outdoor duties often need added protection from bright sun and glare, which can impair vision and create a dangerous situation." says Luanne Freund, Director of Marketing, "Others, such as sharpshooters and firefighters, who need the ability to see clearly in smoke and haze, need to improve their vision during dangerous emergency responses. Our line of grey, blue, silver, and yellow tinted lenses, in addition to the prescription-ready frames, offer all professionals the options they need for eye protection and vision enhancement when using Scott respirators."

Built as rugged as Scott's respiratory protection products, the spring-tempered mounting rings and lens frames of the new facepiece lens kits are constructed of a durable high-tech alloy to maintain lasting shape and coated with a resilient finish to provide a secure grip inside the facepiece. Stainless steel screws and high performance eye wires are used to secure prescription lenses.

Fully adjustable, the facepiece lenses can be positioned for a precise and customized fit for each user. While they are designed for a secure fit and no movement during use, they can be easily removed for cleaning and transfer between same model facepieces.

"We have designed these lens kits to be a visually superior optical system for a myriad of applications for all of our respiratory protection customers," says Ms. Freund, "and we have done it with maximum user comfort in mind."
